

FREE Licence

- The system provides every user with the opportunity to try the system services for free.
- New clients are automatically set up with a free 100-year license.
- A valid license is indicated by a green dot in the upper right corner of the company administrator's work page.
- In the free license mode, all services can be tested without limitations.
- Each user decides for himself when using the system is commercially interesting for him and switches to its normal (non-testing) use. Therefore, it is sufficient to start using the system commercially, in the "system license" mode. There is no need to activate any feature.

ORGSU Licence

- ORGSU System License is intended for general work with the system.
- There are currently two licenses and they differ in the amount of operating fees.
- The operating fee is calculated as a % of the entry fee price and the price of the goods sold by the e-shop. Minimum price for processing one race registration is USD 1.3
- Currently 2 licenses are offered for race organizers, they are automatically allocated according to the nature of the company as follows:
 - Commercial (Organizers, clubs, ...) 4%
 - Non-commercial (foundations, schools, ...) 2 %
- The percentage rate per licence can be negotiated bilaterally.

Timing Licence

- Activates the services of receiving technical times into the system, tracking services and publishing results and tracking.
- It is valid for all races started in one race day.
- The license must be manually activated (ordered)
- The price for timing 1 athlete in a given race decreases with the number of competitors:

Example of No of athletes in one race	Timing unit price of 1 athlete timing USD	Total price * USD
100	0.5	50
500	0.45	230
2000	0.4	800

- The exact unit price is calculated as a decreasing logarithmic function after the end of the race.
- Ordering a license allows a real race to be timed for testing purposes and then erasing the times on the test. Do this all so many times before you gain the necessary skills and absolute confidence.

* The total price will reflect not only the number of competitors, but also the number of split times and/or the number of GPS locations gathered.
